**Header :Ongoing Training for Renzacci UK Engineers at Pony**

Italian design flair meets with engineering precision at the Pony factory in Milan.

Renzacci UK managing director Jason Alexander and engineer Jeremy Jones were in Italy to view Pony's new MG405 shirt machine which will fully launch at the beginning of 2007.

“As part of our on-going training programme we try and take all the engineers out to the factories at Renzacci SpA and Pony,” explains Jason Alexander.

“It’s a two-way process with our team gaining valuable experience and the designers welcoming input from our field engineers.”

It was Jeremy’s first visit to the factory and he has no doubts that it was a valuable experience.

“Everything is made on site. It really was an eye-opener to see a piece of sheet metal coming in, going through the complete production process and leaving as a finished machine,” says Jeremy.

“It makes a difference when I’m with clients as when people ask about the equipment I am able to talk from first hand experience about the manufacture.”
