## PRESS RELEASE

**Issue Date :20 June 2010**

**Header :New Pony 405 Shirt Machine forms the cornerstone of a professional shirt service.**

**Renzacci UK plc** believes that the new and improved Pony MG405 shirt finisher lies at the heart of any successful shirt laundering service. Many dry cleaners have already added a shirt service to their business to help them weather the current recession. This is an added value opportunity, generating customer loyalty and repeat business, as a quick turn-round item, it gives customers an additional reason to visit the shop and use other services.

### **PONY MG405 SHIRT FINISHER**

The Pony MG405 has been completely remodeled for 2010 and produces a perfect finish on any type of shirt material. New features on the 405 model include a vacuum across the entire dummy area, which makes it easy for the operator to dress the shirt. The front closing paddle is flexible and padded, thereby eliminating pressure marks as well as avoiding gloss and scuffing to buttons and seams. The paddle is equipped with two joysticks so the operator can adjust the vertical alignment of the sleeve clamps to the armhole.

Special pneumatic clamps stretch down the shirt body and tighten the seams while they are fast dried by a powerful hot airflow. Oval clamps hold up the sleeves, rotating and fitting the cuff shape, thus conforming to the sleeve shape. Neck holding is also pneumatic. The unit trolley is fitted with a photocell for automatic positioning of the rear clamp with the lower shirt edge.

A microprocessor with 10 programmes allows automatic steaming cycles to suit different fabric types and residual moisture content. Manual operation is also possible. Additional accessories on the 405 include water spray gun, electric iron, button post and shirt hangers, pneumatic side clamping device and air vent chimney with sound insulation.

## PRESS RELEASE

### **PONY CCP**

An ideal companion to the 405 is a Pony CCP collar and cuff press, which together with the new PCM08 folder, combine to form a perfect shirt finishing system. The CCP greatly helps in the finishing of those key parts of the shirt that are so important to a smart formal look. This is an air-operated press with built-in vacuum to allow fast and efficient setting of the shirt as well as aiding the drying of the fabric. Special padding is used on the bucks to prevent damage occurring to buttons and avoid pressure marks. The machine is available as the CCP-V with a steam heated head powered by either built-in or central steam. The CCP-E, on the other hand, has an electrically heated head.

### **CLASSIC 110 IRONING TABLE**

For smaller businesses or shops wishing to test the market for a shirt service, a simple ironing table may be the answer. For this purpose, Renzacci UK recommends its Pony Classic 110 or the Pony FVC finishing table with built-in boiler for a more high volume business. This is supplied with a powerful vacuum unit, a heated buck and the Classic has an adjustable height from 750 to 930mm. Two Classic 110s may be fitted back to back, sharing a 212E single phase boiler to enable two operators to work simultaneously.
