**Header : RENZACCI ADDS TO SHIRT FINISHING RANGE**

Renzacci UK plc has expanded its range of dedicated shirt finishing equipment with the introduction of the new Pony MG405 shirt finisher for Spring 2006.

The MG405 represents the perfect finishing system for any type of shirt, says Renzacci UK. The new unit replaces the popular MG402 shirt former and CCP collar and cuff press in offering dedicated shirt finishing potential for drycleaners and launderers.

Renzacci UK managing director Jason Alexander comments, "Shirt Processing is still very much a growing market. I would say it is the number one growth area in the industry and it's attractive to newcomers and experienced cleaners alike because it offers practitioners a great deal of flexibility of approach.

"In the past, processing shirts usually meant either a large, expensive shirt machine, or ironing boards with the resultant high labour outlays, but with the MG series Pony and Renzacci UK Plc have introduced a system which is affordable, economical and extremely simple to use.

The MG405 builds on the standards set by the MG402 and is designed for operators who have a steady input of business and want top flight finishing with the minimum of fuss. As with all Pony equipment the needs of the operator have been given as much consideration as those of the end user – with the aim of total satisfaction for both."

Features of new MG405 include a vacuum that reaches across the whole dummy area making it easier for the operator to dress the shirt. The front closing paddle is flexible and padded to eliminate any pressure marks as well as avoiding gloss, button and seam scuffs. Two joysticks are fitted on the paddle making it possible to adjust the vertical alignment of the sleeve clamps to the armhole.

Special pneumatic clamps stretch down the shirt body and tighten the seams while they are fast dried via a powerful hot airflow. Oval clamps hold up the sleeves, rotating and fitting the cuff shape, thus conforming to the sleeve shape. Neck holding is also pneumatic. The unit trolley is fitted with a photocell for automatic positioning of the rear clamp with the lower shirt edge.

A microprocessor with 10 programmes allows automatic steaming cycles air/steam mix and ventilation (hot and cold air) according to the composition of the fabric and how wet the shirt is. Manual operation is also possible.

Additional accessories include water spray gun, electric iron, button post and shirt hangers, pneumatic side clamping device and air vent chimney with sound insulation.

Jason Alexander continues: "We have the experience of many years of helping people establish ironing services, and watching them grow into semi-industrial laundries, all the way to large million pound factories. With an inexpensive, yet professional system from Renzacci UK plc, you can have the ability to cater for this market and watch your business grow."

Renzacci UK offers a full service package and personally tailored finance options for all new equipment.
